SW110 & SW260 SWIVEL BRACKETS for ILLUMINATOR

INDUSTRIAL STRENGTH, ADJUSTABLE SWIVEL BRACKETS, FOR USE WITH MAN-D-TEC® ILLUMINATOR LIGHTING SYSTEMS.

When precise light control is needed, these swivel brackets allow the Illuminator light strips to be aimed at specific locations and then can be locked in place. This allows the lighting to either highlight wall panels or direct lighting into the cab interior.

SW110: When mounted to an Illuminator strip, they allow the lights to be rotated 55 degrees left or right of center and locked in place.

SW260: The unique design of these brackets allows the Illuminator to be rotated 260 degrees in order to properly position the lighting for dramatic results and maximum lighting in the cab.
